AIML BUILD CYCLE • TEAM [X]

[Your Project Name]

[ACRONYM]

[One or two sentences describing what your project does, in plain language — this is the line a judge or visitor reads first, so keep it clear and specific.]

PROJECT HEADS ***[Name 1 & Name 2]***	PROJECT TEAM ***[N members • Team X]***
DOCUMENT TYPE ***Formal Project Document***	DATE ***[Month Year]***

How to Use This Template

This is the standard MIC AIML Build Cycle project document template. It is designed so every team's write-up shares the same structure, making projects easier to review, compare, and hand off.

Before you submit

- Replace every bracketed placeholder — text that looks like [this] — with your own project's content.
- Replace each dashed placeholder box with your own diagram (Insert → Picture, or draw it with shapes / SmartArt / a whiteboard export).
- Add or remove table rows freely — the section structure should stay, but the number of rows (capabilities, team members, risks, etc.) is up to your team.
- Delete this "How to Use This Template" page from your final submission.
- Keep the colour palette and fonts consistent if possible, so all Build Cycle documents look and feel like one family — see the Style Reference on the closing page.

Document structure

- 1. Project Brief — what you're building, why, and for whom.
- 2. Core Capabilities — the main things your system can do.
- 3. System Pipeline — the step-by-step flow from input to final output.
- 4. System Architecture — how services/components are wired together.
- 5. Subsystem Integration Map — how data moves between subsystems.
- 6. Team Structure & Ownership — who owns what, plus leadership and roster.
- 7. Technology Stack — the languages, frameworks, and tools you're using.
- 8. Milestones & Development Timeline — your phased build plan.
- 9. Risks & Mitigations — what could go wrong, and your plan for it.
- 10. Success Metrics — how you and reviewers will know it worked.

1. Project Brief

[Write a short paragraph (3–5 sentences) introducing your project: the problem it solves, the core idea, and what makes it an AI/ML system.]

Primary Objective	*[The single sentence that captures what you are building and why it matters.]*
Research / Product Workflow	*[Step 1 → Step 2 → Step 3 → … → Final Output — the high-level flow a user or piece of data moves through.]*
Core Output	*[What the system actually produces at the end — a report, a dashboard, a prediction, a recommendation, etc.]*
Target Audience	*[Who this is for — the users, industries, or teams that would actually use this.]*

2. Core Capabilities

[List 4–8 core capabilities. Each should map to a real module or service in your architecture — avoid vague capabilities that don't correspond to actual components.]

ID	Capability	Description
01	***[Capability Name]***	*[What it does, and which tool / API / model powers it.]*
02	***[Capability Name]***	*[What it does, and which tool / API / model powers it.]*
03	***[Capability Name]***	*[What it does, and which tool / API / model powers it.]*
04	***[Capability Name]***	*[What it does, and which tool / API / model powers it.]*
05	***[Capability Name]***	*[What it does, and which tool / API / model powers it.]*
06	***[Capability Name]***	*[What it does, and which tool / API / model powers it.]*

3. System Pipeline

[Describe the pipeline as a validation loop, a linear flow, or whatever shape fits your system. Explain briefly how data/requests move from start to finish, and where checks or human review happen.]

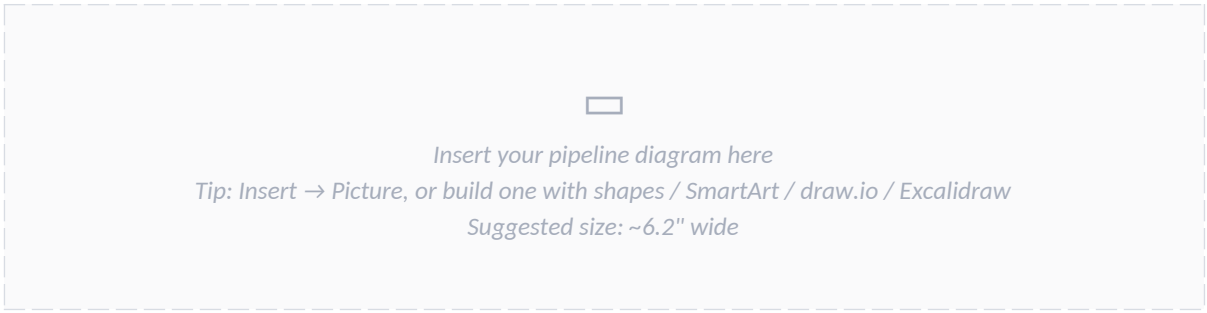

Figure 1 — [Your pipeline diagram caption]

Pipeline Stages

[Add or remove rows so the number of stages matches your actual pipeline.]

1	***[Stage Name]*** *[One line describing what happens in this stage.]*
2	***[Stage Name]*** *[One line describing what happens in this stage.]*
3	***[Stage Name]*** *[One line describing what happens in this stage.]*
4	***[Stage Name]*** *[One line describing what happens in this stage.]*
5	***[Stage Name]*** *[One line describing what happens in this stage.]*

[One closing sentence on how state/context/memory persists across the pipeline, if relevant.]

4. System Architecture

[Describe your architecture style — e.g. service-oriented, monolith + workers, client-server — and name the main components and how they connect.]

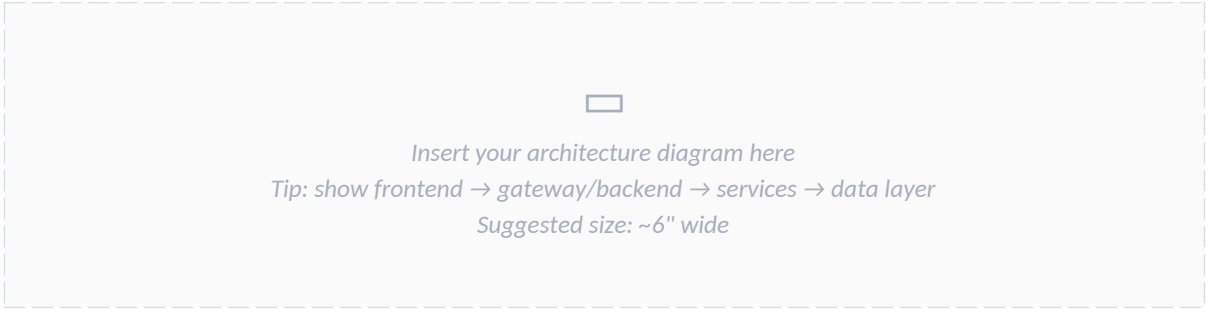

Figure 2 — [Your architecture diagram caption]

Service / Component Breakdown

- *[Component Name] — [what it's responsible for.]*
- *[Component Name] — [what it's responsible for.]*
- *[Component Name] — [what it's responsible for.]*
- *[Component Name] — [what it's responsible for.]*

5. Subsystem Integration Map

[For each major subsystem, show the path data or control takes through it, from input to where it lands. Use arrows (→) to keep it scannable.]

Subsystem	Integration Path
[Subsystem Name]	*[Step → Step → Step]*
[Subsystem Name]	*[Step → Step → Step]*
[Subsystem Name]	*[Step → Step → Step]*
[Subsystem Name]	*[Step → Step → Step]*

6. Team Structure & Ownership

[Explain your ownership model in one line — e.g. paired ownership per subsystem, individual ownership, rotating roles, etc.]

Member(s)	Primary Responsibility	Key Components
[Name(s)]	*[Responsibility area]*	*[Tools / components owned]*
[Name(s)]	*[Responsibility area]*	*[Tools / components owned]*
[Name(s)]	*[Responsibility area]*	*[Tools / components owned]*
[Name(s)]	*[Responsibility area]*	*[Tools / components owned]*
[Name(s)]	*[Responsibility area]*	*[Tools / components owned]*

Project Leadership

[Name] *Project Head • [Focus area(s)]*	***[Name]*** *Project Head • [Focus area(s)]*

Team Roster

[List every team member. Mark project heads clearly, and add/remove cells so the grid fits your team size.]

[Name] — Project Head	***[Name] — Project Head***	*[Name]*
[Name]	*[Name]*	*[Name]*
[Name]	*[Name]*	*[Name]*

7. Technology Stack

[List the layers relevant to your project. Delete rows that don't apply, and add rows for anything not listed (e.g. mobile, hardware, message queues).]

Frontend	*[e.g. React, Next.js, Flutter]*
Backend	*[e.g. Python + FastAPI, Node.js + Express]*
LLM	*[e.g. Llama 3, GPT, Claude, Gemini]*
Agent Framework	*[e.g. CrewAI, LangGraph, custom orchestration]*
Data / APIs	*[e.g. domain-specific APIs, datasets, scrapers]*
RAG	*[e.g. embeddings, chunking, retrieval strategy]*
Vector Database	*[e.g. pgvector, Pinecone, Chroma]*
Database	*[e.g. PostgreSQL, MongoDB, MySQL]*
Data Tooling	*[e.g. NumPy, Pandas, Matplotlib]*
Storage	*[e.g. Supabase Storage, S3]*
Authentication	*[e.g. Supabase Auth, Auth0, Firebase Auth]*
Deployment	*[e.g. AWS, Vercel, Railway]*

8. Milestones & Development Timeline

[Break your build into phases that match your actual timeline — 3 to 5 phases usually works well.]

Phase	Focus	Key Deliverables
Phase 1 *[Weeks x–y]*	*[Foundation]*	*[What gets built / set up in this phase.]*
Phase 2 *[Weeks x–y]*	*[Core Build]*	*[What gets built / set up in this phase.]*
Phase 3 *[Weeks x–y]*	*[Integration]*	*[What gets built / set up in this phase.]*
Phase 4 *[Weeks x–y]*	*[Polish & Demo]*	*[What gets built / set up in this phase.]*

9. Risks & Mitigations

[Name real risks specific to your project — technical, data, timeline, or team risks — not generic ones.]

Risk	Mitigation
[Risk description]	*[How you plan to prevent or handle it]*
[Risk description]	*[How you plan to prevent or handle it]*
[Risk description]	*[How you plan to prevent or handle it]*
[Risk description]	*[How you plan to prevent or handle it]*

10. Success Metrics

[Pick metrics you can actually measure by demo day. "Indicative" targets are fine early on — refine once your pipeline runs end-to-end.]

Metric	Target (Indicative)
[Metric name]	*[What "good" looks like]*
[Metric name]	*[What "good" looks like]*
[Metric name]	*[What "good" looks like]*
[Metric name]	*[What "good" looks like]*

Style Reference

[Keep this palette and Calibri as the base font across your document for a consistent MIC AIML Build Cycle look. Delete this page if your team prefers your own styling.]

	Role	Hex
	Navy — headings	#1F2A44
	Slate — sub-labels / table headers	#44546A
	Blue — accents / kickers	#1D6FB8
	Orange — leadership highlight	#E8622D
	Rule grey — borders	#D8DCE3
	Mid grey — captions / notes	#8A94A6
